The increasingly popular east Sarawak/west Sabah tour provides seasoned Borneo birders with an opportunity to get to grips with several restricted-range endemics not available at 'traditional' sites, as well as a supporting cast of other highly sought-after Bornean specialities. Although it can be run as an extension to our regular Sabah tours, this slightly longer visit was run as a tour in its own right. Highlights of the tour were many, and included Black Oriole, Dulit, Bornean and Sunda Frogmouths, Bornean Banded and Blue-banded Pittas, Hose's and Whitehead's Broadbills, Whitehead's Spiderhunter, Rail-Babbler, Mountain Hawk-Eagle, Ferruginous Partridge, Rufous-tailed Jungle-Flycatcher, Pygmy Ibon, Hook-billed and Black-and-White Bulbuls, Fruthunter and Everett’s Thrush, the latter possibly the first recent record for the area. With each of the group on their second Borneo visit, the focus of the tour was on specific 'targets' which had been missed previously, as well as on the restricted-range endemics.

A long but event-free drive from Kota Kinabalu to Lawas, and thenceforth by 4WD to our destination deep in the interior of eastern Sarawak saw us commencing our ascent to our first destination by 11am. Despite the less than auspicious timing, bird activity remained excellent well into the early afternoon, throughout the pleasant climb up to approximately 900m.

Once we started our ascent, various target species made themselves evident - a singing Yellow-crowned Barbet impressed with its understated finery, Grey-bellied and Scaly-breasted Bulbuls twittered musically in the treetops, and Pygmy Ibon was a new bird for everyone. Usually a difficult bird to see in Sabah, this was to give us multiple sightings on every day of the tour! Much more striking was a male Banded Kingfisher (the Bornean form split from the continental form by some as Black-faced Kingfisher) which gave prolonged
views on an exposed branch, characteristically raising and lowering its crown feathers. A vocal and visually stunning Red-bearded Bee-eater was another much-wanted bird for some of the party, and other notables included Chestnut-breasted and Black-bellied Malkohas, and Bornean Bulbuls.

_Banded Kingfisher and Black Oriole_

_Bornean Frogmouth and Black Oriole_

After a late lunch at our campsite, we ascended further, and before long connected with one of the main goals of the trip - Black Oriole. A family, including a grey-billed juvenile, entertained us with their fluty whistles and prolonged views, and these proved to be the first of many sightings over the next two days. As we waited for dusk, a Rhinoceros Hornbill flew past, and then, well before dark, a Bornean Frogmouth began calling, and was eventually located, without the aid of a flashlight, sitting quietly on a low branch. These delightful little frogmouths have proven challenging to see on past trips, so this was a much-appreciated bonus. Indeed, a second bird gave brief views before darkness descended, when we heard at least six birds vocalising, bringing an exceptional first day to a triumphant conclusion.

Still not fully satiated with our views of frogmouths, our second day began a couple of hours before dawn, and we were rewarded with fine spotlit views of two more Bornean Frogmouths (front and back views), and at least four calling birds. Once it got properly light, we spent the day climbing to around 1200m. In contrast to the previous day, bird activity was less frenetic, but there were still more than enough ‘goodies’ to keep us singing the praises of this amazing locality. Black Orioles were abundant near the trail, and once we found our way into the forest, we were treated to exceptional and prolonged views of a Rail-Babbler - an early contender for Bird of the Trip - as it sauntered toward us and then downslope to our left. We barely
had time to catch our breath before a Bornean Banded Pitta began calling, and the male gave fleeting glimpses to all those in the party who had not seen one previously. Temminck’s Babbler played hide-and-seek with us for a while before giving themselves up, while further up the hillside, we encountered a Bornean Barbet sat on a sunlit treetop, and more Pygmy Ibon. Two further Bornean Banded Pittas were heard (one giving the briefest of glimpses) but the much-wanted Blue-banded Pitta remained silent. The next new bird was a bit of a surprise - a Rufous-tailed Jungle-Flycatcher sitting quietly in a stand of young saplings near a stream, providing us with great looks at the poorly-known and rarely seen Bornean race, undoubtedly a good split from Philippine birds. We watched a Mountain Serpent-Eagle soaring in the cloudless blue sky in the heat of the day and ate lunch to a soporific chorus of Mountain Barbets. A hot and generally quiet descent back to Camp in the afternoon was enlivened by good views of a Long-tailed Broadbill and an unobtrusive Bornean Treepie. As we awaited dusk, we scanned the forested ridge opposite the camp, and it soon became clear that numbers of hornbills were using this as a route to a communal roost just out of our view. Flocks of Rhinoceros, Wreathed, Bushy-crested, and, best of all, Helmeted Hornbills provided an unforgettable spectacle for the next hour, totaling about 40 birds in all. We watched several apparent courtship-related skirmishes, with birds chasing each other from tree to tree, and on one occasion, a Helmeted Hornbill which gained height rapidly to attack a low-flying Blyth’s Hawk-Eagle elicited gasps of amazement from a very appreciative audience! All this as the first Bornean Frogmouth of the evening began calling nearby.

**Rufous-tailed Jungle-Flycatcher and Mountain Barbet**

At dawn the following morning we saw smaller numbers of hornbills leaving the roost area, including 2 Helmeted, and then we climbed a short distance to try to get repeat views of the Rail-Babbler. Although we were unsuccessful (it had moved further upslope), we did get good looks at 3 Hill Blue Flycatchers (2 males and a female) of the distinctive endemic *coeruleatus* race, and a Rufous-chested Flycatcher feeding a fledgling. Our descent of the mountain was generally uneventful, with mostly repeat views of birds seen earlier, including a family of Black Orioles at about 850m, a pair of Red-throated Barbets prospecting for a nest hole, a Scarlet Minivet in the process of nest-building, ‘Bornean’ Hair-crested Drongos and Yellow-rumped Flowerpeckers. A noteworthy addition to the trip list was a resplendent male Green Broadbill, looking almost as extraordinary in flight, with its jet black underwings, as it did perched. A long and bumpy 4WD drive to our next destination was relieved by brief views of several Ruddy Cuckoo-Doves, Chestnut-bellied Malkoha, Black Eagle, and two *torquatus* race Oriental Honey-Buzzards whose plumage convincingly mimicked that of Crested Serpent-Eagle. Upon arrival, we dumped our bags before heading straight back out into the gathering dusk, to be rewarded with wonderful views of a pair of Dullit Frogmouths, one perched up in full view. We returned to base for a much-appreciated evening meal and an opportunity to relive the moment this formerly mythical species had become a delightful reality.

Hose’s Broadbill and Blue-banded Pitta were the two biggest remaining targets for the group, so the following morning we decided to try a new site where Hose’s Broadbill had been heard recently. Before long a splendid male gave good flight views, and then perched up to the great satisfaction of all. Backing up the broadbill was a fly-over Black-and-white Bulbul, several Bornean Brown Barbets, and a charming pair of Yellow-throated Martens bounding along the road, too engrossed in each other to notice us for some time. After lunch we headed up to 1700m in the hope of scoring some upper montane targets. Things were quiet initially, but activity increased as the afternoon wore on. Chestnut-headed Laughingthrushes were numerous, as were Bornean Leafbirds and Bornean Bulbuls, and Golden-naped Barbets eventually gave themselves up after calling out of view for some time. A female Frithunter appeared briefly in a fruiting tree, and more unexpected was an Everett’s Thrush which flew close across the road, an extremely rare sighting outside Kinabalu National Park. A small troupe of Maroon Leaf Monkeys were located close to the road, and we finished the day with a fine male Orange-backed Woodpecker, a particular target for one of our
As light rain fell in the evening, our first of the trip, we made plans to try for the other 'big one' in the morning, and went to bed dreaming of Blue-banded Pittas!

Ferruginous Partridge and Hook-billed Bulbul

Red-crowned Barbet and Sunda Frogmouth

Once we had reached the required altitude, we began a downhill walk listening out for the distinctive whistle of our target. As we walked, a Bock’s Hawk-Cuckoo gave us great views, followed by more Hose's Broadbills - a pair this time - and another pair of Black-and-white Bulbuls. A couple of Bornean Spiderhunter were new for the trip, but the bird we were really hoping for remained silent. Eventually, we decided to return to the vehicle, and as we did so, a soft monotone whistle broke the silence - and it was close! Access to the forest below the road was a challenge however. Our only option was to position ourselves along a fallen log in single file. Our chances did not seem particularly good, but to our amazement, within a few minutes, a resplendent male Blue-banded Pitta hopped up onto a branch over the log we were standing on, in full sunlight, and then proceeded to hop around us no more than 10 metres away. Sunlight filtering through the sparse roadside vegetation made the bird's vermillion underparts and electric blue necklace burn with extraordinary intensity, as we stood, hearts pounding, in stunned silence! With the undoubted bird of the trip under the belt, we decided to return to upper montane birding. Nothing could follow the pitta, but we were pleased to finally connect with no less than four Whitehead's Spiderhunters, and other commoner species such as Black-capped White-eye, Indigo Flycatcher, Bornean Whistler and yet more Pygmy Ibon. Then a flash of emerald green burst into the afternoon sunlight and we found ourselves feasting our eyes on a male Whitehead’s Broadbill - our second endemic broadbill of the day - and a fitting end to an extraordinary day's birding!
The last day of the tour started extra early, as we made a successful effort to get further views of Dulit Frogmouth. Once dawn arrived, we watched a Malaysian Eared-Nightjar flying high overhead, and then, as the day birds took over, added Red-bearded Bee-eater, Black-and-Red Broadbill, Grey-rumped Treeswift, and more Pygmy Ibon. With just half an hour left before we would need to return to pack and catch our flight, we heard a Ferruginous Partridge calling some way down the road. The bird fell silent, but we walked to where we judged the sound had come from, and then sat down to wait. Within a minute, a lone Ferruginous Partridge crossed the road in front of us, and then spent the next 10 minutes walking up and down the opposite verge, calling frequently, before recrossing the road at a more leisurely pace and disappearing into the undergrowth. What a way to end this particular leg of the tour! A bumpy flight and several hours’ drive later, we arrived at a remnant path of peat swamp forest in the heat of the day, and temperatures of over 35 deg C! Finding anything in these conditions would be challenging, and so it proved. However, persistence paid off, with good views of Fluffy-backed Tit-Babblers, Red-crowned Barbet, Chestnut-bellied Malkoha, Rufous and Checker-throated Woodpeckers and Rufous Piculet, and, after a long wait, our main target at this locality, a single but obliging Hook-billed Bulbul.

Returning to Kota Kinabalu for the conclusion of the tour, we decided to have one more throw of the dice, and made a short detour. Before long, we were watching a female Sunda Frogmouth at eye level, followed by a stunning male directly overhead. Finally it was time to say goodbye, and to celebrate what had been an exceptional tour with a fine seafood dinner!

**Bird of the Tour**

1. Blue-banded Pitta
2. Rail-Babbler
3. Hose’s Broadbill
4. Dulit Frogmouth
5. Whitehead’s Broadbill
